PUBH 6381
Genetics in Public Health in the Era of Precision Medicine
Fall, 2018

COURSE & CONTACT INFORMATION
Credits: 2
Meeting Day(s): Wednesdays
Meeting Time: 11:15 am – 1:10 pm
Meeting Place: Bruininks Hall, Room 131A
Instructor: Ellen W Demerath
Email: ewd@umn.edu
Office Phone: 612-624-6669
Fax: 612-624-6669
Office Hours: by appointment
Office Location: WBOB 455

COURSE DESCRIPTION
Our understanding of human genomic variation and its relationship to health is expanding rapidly, and this knowledge is now being translated primarily through the field of “precision medicine” (finding the right drug for the right person at the right time), which is likely to improve clinical care, at least for some diseases and for those with greater resources. Public health, in contrast, seeks to abate the social and environmental factors that lead to disease, and fosters policies and programs that enhance health at the population level to reduce health disparities. Is there a conflict here? This course will provide an introduction to the field of public health genomics at this interesting point in its history. Approximately one-half of the course will be devoted to Genetic Epidemiology. Topics will include different approaches to measuring the association of genes with disease: family history, heritability, and genetic association, epigenetics, and Mendelian Randomization as an approach to causal inference. The second half of the course will cover public health genomics, including “precision public health”, genetic screening programs, and the possibilities and pitfalls of direct to consumer marketing of genetic tests.

COURSE PREREQUISITES
This is a graduate course designed primarily for Epidemiology MPH and PhD, and fulfills the “Epi Of” requirement for the MPH in Epidemiology. Graduate students in other Divisions within the School of Public Health, and students pursuing graduate degrees in the biological or academic health center sciences are very welcome and add to the richness of discussions. Completion of a course in genetics at the undergraduate or graduate level, and an introductory course and familiarity with epidemiology are required. Please contact the instructor if you have questions on prerequisites or would like to ask for special permission.

COURSE GOALS & OBJECTIVES
At the end of this course, you will:
- Gain practice reading the public health genomics literature to describe family history and specific genetic variants as risk factors for major health challenges
- Learn to summarize and interpret tables and figures describing results of genetic epidemiology studies
- Apply epidemiologic concepts to select approaches for population-based testing and screening
Discuss similarities and contrasts between the tenets and methods of Precision Medicine and the tenets and methods of Public Health

Advocate for attention to ethical and social implications of genomics and Precision Medicine, including structural bias

Create educational material appropriate for the general public about the benefits and risks of direct to consumer genetic testing using the Infographic format

METHODS OF INSTRUCTION AND WORK EXPECTATIONS

Each 2 hour class meeting will include an instructor-led lecture, with activities for student learning and class discussion. The class discussion will focus on a “journal club” where each week a different set of students will lead discussion of an assigned reading from the public health genomics literature.

Graduate work requires at least 2 hours OUTSIDE of class for each credit hour in class; therefore, given you are spending 2 hours in class per week, you should expect to spend up to 4 hours per week outside of class reading and preparing for class, completing assignments, and researching and producing your group project.

Learning Community
School of Public Health courses ask students to discuss frameworks, theory, policy, and more, often in the context of past and current events and policy debates. Many of our courses also ask students to work in teams or discussion groups. We do not come to our courses with identical backgrounds and experiences and building on what we already know about collaborating, listening, and engaging is critical to successful professional, academic, and scientific engagement with topics.

In this course, students are expected to engage with each other in respectful and thoughtful ways.

In group work, this can mean:
- Setting expectations with your groups about communication and response time during the first week of the semester (or as soon as groups are assigned) and contacting the TA or instructor if scheduling problems cannot be overcome.
- Setting clear deadlines and holding yourself and each other accountable.
- Determining the roles group members need to fulfill to successfully complete the project on time.
- Developing a rapport prior to beginning the project (what prior experience are you bringing to the project, what are your strengths as they apply to the project, what do you like to work on?)

In group discussion, this can mean:
- Respecting the identities and experiences of your classmates.
- Avoid broad statements and generalizations. Group discussions are another form of academic communication and responses to instructor questions in a group discussion are evaluated. Apply the same rigor to crafting discussion posts as you would for a paper.
- Consider your tone and language, especially when communicating in text format, as the lack of other cues can lead to misinterpretation.

Like other work in the course, all student to student communication is covered by the Student Conduct Code (https://z.umn.edu/studentconduct).

COURSE TEXT & READINGS

REQUIRED READINGS:

All readings will be available on the Moodle Class site at least one week prior to the class meeting for which it is assigned. To access the course website, go to http://myu.umn.edu, log in with your ID/password, click on the “My Courses” tab, and select “PubH 6381”.

Text:

Additional Readings, by week:

Week 1: Introduction of PHG and PM
(Text, Chapter 1)

Week 2: Fam Hx and Heritability
(Text, Chapter 2)

Week 3: Genetic Association and MR
(Text, Chapter 8)
• Lawlor, Debbie A. ; Harbord, Roger M. ; Sterne, Jonathan A. C. ; Timpson, Nic ; Davey Smith, George Mendelian randomization: Using genes as instruments for making causal inferences in epidemiology. Statistics in Medicine, 15 April 2008, Vol.27(8), pp.1133-1163

Week 4 : GWAS and intro to Genetic Tests
(Text, Chapter 7)

Week 5: CVD Genomics

Week 6: Cancer Genomics

Week 7: Epigenomics and Health Disparities
(Text, Chapter 14)

Week 8: Polygenic Risk Scores

• ROC Curves and Area Under the Curve (AUC) Explained: https://www.youtube.com/watch?v=OAl6eAyP-yo

Week 9: Pharmacogenomics

Week 10 Newborn Screening

TBD

Week 11: Race and Diversity and PM

Week 12: Thanksgiving, no class

Week 13: Familial Hypercholesterolemia Screening

• Santos, RD; Frauches, Ts; Chacra, Apm. Cascade Screening in Familial Hypercholesterolemia: Advancing Forward. Journal Of Atherosclerosis And Thrombosis, 2015, Vol.22(9), pp.869-880

Week 14: Class Discussion/Work Time

• Will Precision Medicine Improve Public Health? NCI Webinars (June 27, 2016) YouTube: https://www.youtube.com/watch?v=3qiTfpCiT9o

ASSIGNMENTS / EXAMINATIONS

1) Assignments (50% of grade) There will be 4 open-book, take-home assignments, submitted on the Moodle site. Each assignment will assess understanding of core concepts and demonstration of competencies highlighted in the course objectives for a set of 3 lessons / weeks, and will include problem solving, short-response, and essay questions. All questions come from the lectures and assigned readings.

2) Journal Club and Participation in Class Discussion (25% of grade) Most weeks of the course (see weekly schedule, above) there will be a 30-minute discussion of one of the assigned readings from the literature, in which students (between 1 and 3) will be the journal club leader/s. Journal club leaders are responsible for thoroughly understanding the reading to the point that they can provide a 10 minute overview of the purpose, methods, and findings, explain to the other students key tables, figures or concepts, and generate 2-3 discussion questions for the class. Students will sign up to lead the discussion for a specific week of class during the first class meeting. A rubric for grading journal club and participation will be provided the first week of class.

3) In-Class Presentation of Infographic: Direct to Consumer Genetic Testing (25% of grade) Students will be assigned to a working group to produce an infographic to educate the general public on the benefits and risks of direct to consumer genetic testing products and services now being marketed to assess health and disease risks. In these groups, you will assign tasks to each group member related to searching the literature, documenting evidence, writing the text, formatting and producing the infographic, etcetera. A limited search of the recent literature on PubMed, as well as internet-based research and blogs will provide you with plenty of interesting and helpful ideas and information. Each individual working on the infographic must list the elements that they were primarily responsible for, so that individual grades can be assigned. A rubric for grading of this assignment will be provided at least four weeks prior to the final deadline.

SPH AND UNIVERSITY POLICIES & RESOURCES

The School of Public Health maintains up-to-date information about resources available to students, as well as formal course policies, on our website at www.sph.umn.edu/student-policies/. Students are expected to read and understand all policy information available at this link and are encouraged to make use of the resources available.

The University of Minnesota has official policies, including but not limited to the following:

- Grade definitions
- Scholastic dishonesty
- Makeup work for legitimate absences
- Student conduct code
- Sexual harassment, sexual assault, stalking and relationship violence
- Equity, diversity, equal employment opportunity, and affirmative action
- Disability services
- Academic freedom and responsibility

Resources available for students include:

- Confidential mental health services
- Disability accommodations
- Housing and financial instability resources
- Technology help
- Academic support

EVALUATION & GRADING

Evaluation

Assignment 1: 50 points
Assignment 2: 50 points
Assignment 3: 50 points
Assignment 4: 50 points
Journal Club/Participation: 100 points
Infographic and Presentation: 100 points
TOTAL: 400 points

Grading Scale
The University uses plus and minus grading on a 4.000 cumulative grade point scale in accordance with the following, and you can expect the grade lines to be drawn as follows:

<table>
<thead>
<tr>
<th>% In Class</th>
<th>Grade</th>
<th>GPA</th>
</tr>
</thead>
<tbody>
<tr>
<td>93 - 100%</td>
<td>A</td>
<td>4.000</td>
</tr>
<tr>
<td>90 - 92%</td>
<td>A-</td>
<td>3.667</td>
</tr>
<tr>
<td>87 - 89%</td>
<td>B+</td>
<td>3.333</td>
</tr>
<tr>
<td>83 - 86%</td>
<td>B</td>
<td>3.000</td>
</tr>
<tr>
<td>80 - 82%</td>
<td>B-</td>
<td>2.667</td>
</tr>
<tr>
<td>77 - 79%</td>
<td>C+</td>
<td>2.333</td>
</tr>
<tr>
<td>73 - 76%</td>
<td>C</td>
<td>2.000</td>
</tr>
<tr>
<td>70 - 72%</td>
<td>C-</td>
<td>1.667</td>
</tr>
<tr>
<td>67 - 69%</td>
<td>D+</td>
<td>1.333</td>
</tr>
<tr>
<td>63 - 66%</td>
<td>D</td>
<td>1.000</td>
</tr>
<tr>
<td>&lt; 62%</td>
<td>F</td>
<td></td>
</tr>
</tbody>
</table>

- A = achievement that is outstanding relative to the level necessary to meet course requirements.
- B = achievement that is significantly above the level necessary to meet course requirements.
- C = achievement that meets the course requirements in every respect.
- D = achievement that is worthy of credit even though it fails to meet fully the course requirements.
- F = failure because work was either (1) completed but at a level of achievement that is not worthy of credit or (2) was not completed and there was no agreement between the instructor and the student that the student would be awarded an I (Incomplete).
- S = achievement that is satisfactory, which is equivalent to a C- or better
- N = achievement that is not satisfactory and signifies that the work was either 1) completed but at a level that is not worthy of credit, or 2) not completed and there was no agreement between the instructor and student that the student would receive an I (Incomplete).

<tr>
<td>Scholastic Dishonesty, Plagiarism, Cheating, etc.</td>
<td>You are expected to do your own academic work and cite sources as necessary. Failing to do so is scholastic dishonesty. Scholastic dishonesty means plagiarizing; cheating on assignments or examinations; engaging in unauthorized collaboration on academic work; taking, acquiring, or using test materials without faculty permission; submitting false or incomplete records of academic achievement; acting alone or in cooperation with another to falsify records or to obtain dishonestly grades, honors, awards, or professional endorsement; altering, forging, or misusing a University academic record; or fabricating or falsifying data, research procedures, or data analysis (As defined in the Student Conduct Code). For additional information, please see <a href="https://z.umn.edu/dishonesty">https://z.umn.edu/dishonesty</a></td>
</tr>
<tr>
<td>The Office for Student Conduct and Academic Integrity has compiled a useful list of Frequently Asked Questions pertaining to scholastic dishonesty: <a href="https://z.umn.edu/integrity">https://z.umn.edu/integrity</a>.</td>
<td></td>
</tr>
<tr>
<td>If you have additional questions, please clarify with your instructor. Your instructor can respond to your specific questions regarding what would constitute scholastic dishonesty in the context of a particular class-e.g., whether collaboration on assignments is permitted, requirements and methods for citing sources, if electronic aids are permitted or prohibited during an exam.</td>
<td></td>
</tr>
<tr>
<td>Indiana University offers a clear description of plagiarism and an online quiz to check your understanding (<a href="http://z.umn.edu/iuplagiarism">http://z.umn.edu/iuplagiarism</a>).</td>
<td></td>
</tr>
<tr>
<td>Late Assignments</td>
<td>Points are deducted for late assignments (10% reduced each day they are late)</td>
</tr>
<tr>
<td>Attendance Requirements</td>
<td>Attendance at all lectures is required; Absences require permission of the unit instructor</td>
</tr>
<tr>
<td>Extra Credit</td>
<td>Students have the opportunity to attend a Precision Medicine seminar during the semester and write a summary and critique of the content for extra credit points. A list of seminars will be provided in the first class meeting.</td>
