

UNIVERSITY OF MINNESOTA

Interested in Cancer Related Health Disparities and Community Engaged Research?

Predoctoral and Postdoctoral Fellowships Available

Cancer and Health Disparities T32 Training Program

- T32 Fellowships available through the University of Minnesota Medical School and School of Public Health
- 3 Postdoctoral trainee positions for 2 years
- 3 Predoctoral trainee positions for up to 3 years

This T32 fellowship program seeks to train researchers who are prepared to conduct community-engaged research to develop, test, and disseminate interventions in both clinical and community settings to reduce cancer related health disparities among underresourced populations. The intention of this joint program between the Medical School and School of Public Health is to enhance the diversity of the research workforce in this area by specifically recruiting individuals from underrepresented/underresourced populations who are interested in community-engaged research.
